Chikkaballapur, Karnataka, India | +91 7892601492 | vsmouna19@gmail.com

PROFESSIONAL SUMMARY

Python Backend Developer and Data Engineer with 3+ years of experience designing, developing, and optimizing telecom reporting and automation systems. Proficient in Python, FastAPI, Kafka, and Elasticsearch with strong expertise in data processing, REST APIs, event-driven architectures, and performance tuning. Skilled in building reusable Python packages, parallel processing with multiprocessing and joblib, and Linux-based deployments. Adept at building scalable backend solutions, automating large-scale reporting pipelines, and integrating analytics dashboards for real-time insights.

CORE SKILLS

Languages & Frameworks: Python · FastAPI · REST API Development · Microservices

Data & Messaging: Apache Kafka · Elasticsearch · Pandas · NumPy · Data Engineering

Concurrency & Performance: Python Multiprocessing · Joblib · Multi-threading · Performance Optimization

DevOps & Tooling: Linux · Git · GitLab · Testing · Technical Documentation · Agile/Scrum

Architecture: Event-Driven Systems · Scheduled Jobs · Package Development · API Integration

SOFT SKILLS

- Collaboration with cross-functional teams
- Problem-solving under tight deadlines
- Agile & Scrum methodology
- Clear communication and thorough documentation

PROFESSIONAL EXPERIENCE

Tata Consultancy Services – Bengaluru, India

Product Engineer (Python / Backend Developer) | Feb 2022 – Present

- Designed and implemented scalable REST APIs using FastAPI and Python to deliver 100+ SLA-compliant reports per day across multi-domain telecom data (RAN & Core), with versioning, backward compatibility, and comprehensive API documentation.
- Built event-driven reports processing pipelines using Apache Kafka, enabling and reducing report generation time by 50% and manual intervention by 70%.
- Designed and deployed scheduled jobs for automated report generation, data refresh, and system health checks ensuring timely delivery within defined SLA windows.
- Developed parallel data transformation modules using Python multiprocessing and joblib, cutting data processing time from hours to minutes across high-volume telecom datasets.
- Packaged reusable internal libraries and Python package solutions for shared utility functions, data connectors, and reporting modules promoting code reuse, maintainability, and team-wide scalability.

- Integrated Elasticsearch with APIs for sub-second query responses and interactive data visualizations across different UI.
- Managed source code using Git (GitLab), following branching strategies, code review workflows for smooth team collaboration and deployments.
- Wrote and maintained unit and integration tests to validate API endpoints and transformation logic improving reliability and reducing production incidents.
- Produced clear technical documentation for APIs, pipelines, and internal packages, enabling faster onboarding and cross-team knowledge sharing.
- Administered and debugged services on Linux environments, handling log analysis, process management, cron scheduling, and performance profiling.
- Collaborated with cross-functional teams to define API requirements, achieving **35% faster response time** and improved system scalability.
- Maintained backward compatibility with legacy telecom reporting standards, reducing support tickets by **25%**.

ACHIEVEMENTS

- **On-the-Spot Award:** Delivered a scalable reporting automation module handling 100+ daily reports within SLA.
- **Star Performer Award:** Consistent delivery excellence and customer satisfaction.

EDUCATION

B.E. in Electronics and Communication Engineering - R.L. Jalappa Institute of Technology, 2021

CERTIFICATIONS

Google Cloud Associate Engineer - 2023
